

 **Service Apartment**

Not far from Amstelveen, in the southern district of Amsterdam, is a complex with 60 larger and likewise fully-equipped luxury Amsterdam Service apartments measuring 60, 90, 130 or 150 m<sup>2</sup>. These apartments are highly suitable for multiple occupancy or family use. Once again, these apartments bear the names of Dutch artists: Mondriaan, Vermeer, Van Gogh and Rembrandt. Many works by these world-famous painters can be admired in the Rijksmuseum and the Van Gogh museum in Amsterdam.

Each apartment has the appeal of a real home, and is much more spacious than a hotel room. Some of the apartments even have an attractive open fireplace. The apartments were designed by our in-house architect. Not only will you find everything you need, it is also attractively designed (generally in Dutch style).

Just like in a luxury hotel, our staff delivers a high service level. During the day, a host or hostess will be present to welcome you and your guests and provide you with any information you might need. The big difference from a hotel is that your guests can just ring your doorbell, as if you were at home. The entrance of the Htel apartment complexes is in line with the design of the apartments. We have used attractive, luxurious materials such as marble, copper, ostrich leather and leaded glass. In keeping with the names of the apartments, beautiful modern art can be found in all the public areas.
